

Broadband Fibre Products

Gamma Fibre Broadband has been added to the Broadband Product Family. This premium service provides exceptional speeds and is aimed exclusively at the growing needs of business for quality and reliable services. Here is a table of the products that can be ordered:

	FTTP 40:10 - 1GB:220	SoGEA 40:10 - 80:20
Price	See Billing Page	See Billing Page
Downstream	Up to 1GB	Up to 80Mbps
Upstream	Up to 220Mbps	Up to 20Mbps
Monthly Usage	Unlimited	Unlimited

Fibre broadband is the latest development from our range of Next Generation broadband services. Our Fibre broadband is provided using Fibre to the Property (FTTP) or as a Single order GEA (SOGEA).

SoGEA is Single Order GEA which is a new end user access option within our fibre Broadband family of products. SOGEA is closely related to FTTC (VDSL) with the exception that it does not share the line with a WLR or MPF service.

FTTP is Fibre all the way from the exchange into the customers property. There is no copper at all in these circuits. Less copper and more fibre make for some very impressive speeds and FTTP is certainly the premium broadband service in locations where it is available.

Different routers will be needed to support different products. Once a product is selected, the relevant router(s) will be available to select for the specified speed and service.
