

Gamma Search Tool

Step 1

Go to the landing page on the Gamma Portal and look for the widget named “Gamma Search”

Step 2

Now you can enter your search criteria as stated in in the Gamma Search “Enter a CLI, IP address, inbound company name, Endpoint or support call ID to search for any available information”

Step 3

After you have searched you will be taken to another page that will show you the results, note there is also an advanced search that will give you some more options if you want to narrow down your search.

Gamma Search

Welcome to Gamma search! This allows you to search for services and numbers within Gamma. To search simply enter a valid search term into the simple search box and press search. If you want to look at specific numbers or sets of numbers the advanced button will give you a set of options to find specific products, end points and numbers within ranges.

Simple search terms supported:

- CLI: Search for a specific CLI
- IP: Search for an IP related to a Broadband or SIP product
- Inbound company name: Search for an Inbound company by name

Your WLR Numbers can be managed separately via the WLR Portal
