

Gamma Search

Gamma Search has been developed to assist our customers in identifying which product/service a certain number is live against, or which numbers you have against a product/service.

The checker also provides a simple way to update 999 details on a number-by-number basis.

Gamma Search can be access by going to Help & Support on the Gamma Portal and selecting Gamam Search.

When using the tool, you can opt to search by number, or product (and optionally the product reference too, for some products).

Number Search

Searching for a single number will return the product that the number is live on. If applicable, it will also show the reference, such as a SIP Endpoint or Horizon Company.

“Search for associated numbers” will carry out a reverse search and show all numbers against the above product/product reference combination. Where the reference is not available you will see all numbers associated to that product.

[999 Emergency Contact](#) details can be viewed and edited from here. If there are no details here and the Asset Search prompts you for some then you should add these as soon as possible.

Asset Search

The asset search tool gives you the ability to search for numbers or services against your Gamma account(s). You can search against one or all of your Gamma accounts with either a telephone number or product reference (i.e. endpoint for SIP Trunking). Simple translations are not included.
